Describe Thorndike applied consequences of responding which result in receiving food .. deprived rats in a box what is law of effect it is a principle that states the probability of responding could be raised by some consequences and lowered by others ONCATANIA: LEARNING SPECIFICALLY FOR YOU FOR ONLY \$13.90/PAGE Order Now How does the law of effect relate to operant learning they are both a product of the behavior history of interaction with the environment what would be maintained in the cat's behavior if the cat completed the task, but did not eat the food escaping from the box What is the main disadvantage when studying learning with mazes or devices similar to Thorndike? learning curves depends on apparatus used and measures taken.. are not unitary what does a learning curve tell you the time to complete a response as a function of number of trials. x-axis = successive trial & y-axis - how many seconds it takes to escape
