

Effects of rap lyrics on youth essay

**ASSIGN
BUSTER**

One study found that young subjects who watched violent rap videos were more accepting of violent actions, particularly against women. Additionally, those who watched either violent or nonviolent rap videos were more inclined to express materialistic attitudes and favor potentially acquiring possessions through crime, as well as holding more negative views on the likelihood of succeeding through academic pursuits.

Another study found that adolescent females, after watching a rap video depicting women in sexually subordinate roles, were more inclined to express acceptance of violence against women in a dating situation.

However, increased acceptance of crime and violence appears to be linked with viewing violent or sexist rap videos rather than listening to rap music on its own. been shown to increase suicidal ideation and anxiety or adversely affect self-esteem among college-aged men and women.

Oddly enough, students listening to a nonviolent rap song experienced more depressive symptoms than those who listened to a violent rap song. Overall, rap songs are more inclined to generate angry emotions than heavy metal songs, however.
