

Annotated bibliography: domestic violence in children

Introduction

The research study is based on domestic violence in children and also the effects of domestic violence is a point of research. The increasing number of domestic violence is a huge problem for the current time, in this situation, the study report may be helpful to evaluate a clear picture about the impact of the domestic violence on the mindset of the children.

Review of Article 1

Van der Kolk, B. A. (2017). Developmental Trauma Disorder: Toward a rational diagnosis for children with complex trauma histories. *Psychiatric Annals*, 35(5), 401-408.

According to Van der Kolk (2017) childhood trauma is a most important health challenge in the world it is included neglect and abuse. The research methodology in this article is the primary survey. This challenge can be addressed by suitable intervention and prevention. Many children are a victim to community violence yet; most of the time trauma starts at home. Most of the time children's parents are to blame for child malnutrition (about 80%). On lots of different region of function, the effect of childhood traumatic experience is affecting. The impact of childhood trauma experience is very intense. The domestic violence and alcoholic parents child's childhood is very traumatic and the result is depression, anxiety, medical illness, stress, impulsiveness, and destructive behaviour. The risk factor is losing quality of life. The child can grow up with the improper physical and emotional structure. The limitation of the research work is the sample size, the study is

mainly based on USA survey data, however, the aspects and features of the topic are very relevant for this study.

Review of Article 2

Glenn, C., & Goodman, L. (2015). Living with and within the rules of domestic violence shelters: A qualitative exploration of residents' experiences.

Violence against women, 21(12), 1481-1506.

According to Glenn & Goodman (2015), the parents of a child can be living with an extremely challenging environment like poverty, substance abuse? In that case, the child malnutrition can be a result. The effect of malnutrition is very widely spread. The study is based on some witness. How they are growing up their child, and what are the challenges. The research methodology in this article is the primary survey. The environment of the home is a point of interest in this research work. Single mother, teen mother are mostly facing different kind of challenges live economic challenges, social challenges to grow up a child. The family structure is affected by these problems. Therefore the child will grow up with different stress in mentally or physically. The child also faces different barriers in the way of life. In that case, the life of the family can be decreased quality wise. The report has different problems of life for increases domestic violence. However, the sample size is very small to evaluate a general report.

Review of Article 3

Costa, B. M., Kaestle, C. E., Walker, A., Curtis, A., Day, A., Toumbourou, J. W., & Miller, P. (2015). Longitudinal predictors of domestic violence perpetration

and victimization: A systematic review. *Aggression and violent behaviour*, 24, 261-272.

In this study, domestic violence during childhood is the main focus of the area. Physiotherapy traits are a point of view in this research paper. In a number of samples, size has taken to study on this topic. Domestic violence is mainly occurring in an unstable family structure. Relationships are not may build properly in this kind of family. This study is based on witnesses' answers and opinions; therefore the report is not sufficient. The features of a growing body are an aspect of this violence. The study is very relevant in this study. However, the sample size is a limitation of this study. As it is a sensitive matter the survey result may not suitable for address a conclusion. Therefore the child will grow up with different stress in mentally or physically. The study of the domestic violence using the mentioned article had inferred that the child also faces different barriers in the way of life.

Review of Article 4

Fantuzzo, J. W., & Mohr, W. K. (1999). Prevalence and effects of child exposure to domestic violence. *The future of children*, 21-32.

The increasing number of victims in domestic violence is an increasing number of research work. In this study, sexual harassment is a major point of interest. The different social aspects are responsible for increasing the number of crime, like poverty, malnutrition, economic and social hazards. The effects of domestic violence in childhood are very serious. The research methodology in this article is the primary survey. The child grows up with different mental and physical health problems. The total structure of the
