

Personal statement example

**ASSIGN
BUSTER**

Personal statement I am applying to study for studying BA honors in Diagnostic Radiography. I discovered this while conducting a research for my final year dissertation and grew much interest on the discipline. I have always been interested in health related courses. I have studied health promotion and public health that has enhanced my understanding on the course. Diagnostic Radiography is a diagnostic process that relies on the production of quality images for examination purposes. I figure I needed to pursue the course in order to acquire the skills and knowledge needed to conduct diagnoses of various diseases by examining the high quality images.

I am suitable for the course given I have studied other health related courses, which has equipped me with various skills pertaining to medicine. I can make informed decisions when conducting radiography. I have proper communication and interpersonal skills that can create an atmosphere conducive for diagnosing patients. My previous courses: health promotion and public health, relate to the course. They are concerned with human medicine. Public health enables me to understand the major environmental causes of diseases, how they can be prevented and the necessary steps to undertake in case of an infection or infirmity. Since I have always wanted to help suffering and diseased people, I believe Diagnostic Radiography would allow me establish the problems of patients as a crucial step toward helping them.

My final year dissertation was based on breast cancer screening and I have worked for a care home center where I have conducted health promotion such as 'stop smoking' campaigns. I gained experience while working at the community center and adopted qualities such as examining patients,

bonding with them and maintaining positive communication. I had

researched on reasons for low uptake of breast screening among other cultures on the U. K. In the research, I shadowed radiographer at breast cancer clinic, where I discovered diagnostic radiography.

My hobbies, interests and social activities include socializing, researching, studying and traveling. They contribute to my personality as a person who is always in pursuit of knowledge, which has equipped me with the knowledge I possess at the moment. Acute knowledge is required for my course of interest and through study and research, I will be able meet the demands of the course and adequately care for the patients.

I have studied in English and I have participated in activities and researched in English. I would prefer to study in the UK to perfect my profession based on English as the primary language of communication. Additionally, the universities in the UK are proficient in the training of the course, which I believe would make me a better professional.
