

Computer dependence assignment

**ASSIGN
BUSTER**

They are the one who calculate the speed, altitude and tell the pilot if there is something wrong with the airplane. Moreover, computers also help people to communicate to their loved ones. More than that, computers have a great role in improving safety measures. Like in a car simulation, clients can study and review its product if maximum safety procedures are attained. In contrast, being too dependent from computers has negative outcomes. An example of it, a calculator is a computer. Some people are too dependent using a calculator in solving simple equations.

This attitude will lead people not using critical thinking in solving an equation; instead, they use a calculator for a faster result and a convenient way. In addition, the internet is vastly used nowadays; some students use the internet for their projects and searching some articles. Instead of going to a library, they use the internet to save much time. But the downside of it, some students tend to copy and paste the articles and not use them just for references to make their own assignments. Furthermore, it is very dangerous when a computer is hacked.

Personal or government files might be exposed. Also, public safety will be jeopardized if a warhead/missile is being activated by a terrorist group by hacking the military installation. To summarize, computers might have a threat to mankind as mentioned above, but with proper use of computers and tightening the installation security and computer system, in this way we lessen the threat. What's more, without the aid of computers, life will be much harder compared to the life we are experiencing right now.
