An erratum on

[How brain asymmetry relates to performance - a large-scale dichotic listening study](#)

by Hirnstein, M., Hugdahl, K., and Hausmann, M. (2014). *Front. Psychol.* 4: 997. doi: 10.3389/fpsyg.2013.00997

Kenneth Hugdahl's second affiliation is Department of Radiology, Haukeland University Hospital, Bergen, Norway.

On page 1 the final sentence in the second column should read: “ Moreover, individuals with *lower* degrees of language lateralization as determined with fMRI ([van Ettinger-Veenstra et al., 2010](#)) or magnetic resonance diffusion tensor imaging ([Catani et al., 2007](#)) performed better on tests assessing verbal abilities ([van Ettinger-Veenstra et al., 2010](#)) or verbal memory ([Catani et al., 2007](#)) than individuals with *higher* degrees of lateralization.”

On page 7 the final sentence of the first column should read: “ For the same reason [van Ettinger-Veenstra et al. \(2010\)](#) might have failed with a sample size of $n = 16$ to find correlations between ear asymmetry and *behavioral language tests* in the non-forced condition of the Bergen DL task.”

On page 8 the final paragraph of the discussion should read: “ As far as language is concerned, however, stronger lateralization seems to be associated with better performance in verbal abilities ([Boles et al., 2008](#) ; [Chiarello et al., 2009](#) ; [Everts et al., 2009](#) ; [Barth et al., 2012](#) , *but see* [Catani et al., 2007](#) ; [van Ettinger-Veenstra et al., 2010](#)).”
