This book is designed to provide information about selected topics for the ICND Exam for the CCNA certification. Every effort has been made to make this book as complete and accurate as possible, but no warranty or fitness is implied. The information is provided on an “as is” basis. The author, CiscoPress, and Cisco Systems, Inc. shall have neither liability nor responsibility to any person or entity with respect to any loss or damages arising from the information contained in this book or from the use of the discs or programs that may accompany it. The opinions expressed in this book belong to the author and are not necessarily those of Cisco Systems, Inc. Feedback Information

At Cisco Press, our goal is to create in-depth technical books of the highest quality and value. Each book is crafted with care and precision, undergoing rigorous development that involves the unique expertise of members of the professional technical community.

Reader feedback is a natural continuation of this process. If you have any comments regarding how we could improve the quality of this book, or otherwise alter it to better suit your needs, you can contact us through e-

mail at[[email protected](#)]com. Please be sure to include the book's title and ISBN in your message. We greatly appreciate your assistance.

book Page iv Thursday, July 3, 2003 12: 49 PM iv About the Author Wendell Odom, CCIE No. 1624, is a senior instructor with Skyline Computer ([www.skylinecomputer.com](http://www.skylinecomputer.com)), where he teaches courses on QoS, CCNA, and CCIE lab preparation.

He has worked in the networking arena for 20 years, with jobs in pre- and postsales technical consulting, teaching, and course development. He has

written portions of more than 12 courses, covering topics such as IP routing, MPLS, Cisco WAN switches, SNA protocols, and LAN troubleshooting.

He is the author of three prior editions of CCNA Exam Certification Guide and DQOS Exam Certification Guide. About the Technical Reviewers Elan Beer, CCIE No. 1837, CCSI No. 94008, is a senior consultant and Certified Cisco Instructor. His internetworking expertise is recognized internationally through his global consulting and training engagements.

As one of the industry's top internetworking consultants and Cisco instructors, Beer has used his expertise to design, implement, and deploy multi-protocol networks for a wide international clientele. As a senior instructor and course developer, Beer has designed and presented public and implementation-specific technical courses spanning many of today's top technologies. He can be reached at [email protected]com. Lynn Maynes, CCIE No. 6569, is a senior network engineer with Sprint Managed Network Services specializing in network design, architecture, and security for large-scale networks worldwide.

He has more than 9 years of experience in computer networking and is a coauthor of the Cisco Press book, CCNA Practical Studies. He holds a bachelor's degree in international business from Westminster College. Martin Walshaw, CCIE No. 5629, CISSP, CCNP, CCDP, is a systems engineer working for Cisco Systems in the Enterprise line of business in South Africa. His areas of specialty include convergence, security, and content delivery networking.

Over the last 15 years, Walshaw has dabbled in many aspects of the IT industry, ranging from programming in RPG III and COBOL to PC sales.

When Walshaw isn't working, he likes to spend all his available time with his patient wife, Val, and his sons, Joshua and Callum. Without their patience, understanding, and support, projects such as this would not be possible.

Dedication The nature of the book-writing process requires some long and odd work hours. My darling wife, Kris, never complains about it, picks up my slack, and makes our lives run smoothly— all so I can write. Kris, the first time you read this dedication, you're entitled to a whole week of "Honey do" tasks from me at home.

Thanks for making it all possible! 083x\_FMi. book Page v Thursday, July 3, 2003 12: 49 PM Acknowledgments The technical editing team for this book and its companion volume were fantastic. Not only did they find where I had written wrong technical facts, they also helped me find new, more interesting, and clearer ways to convey certain facts about networking.

Lynn was particularly helpful with comments that helped keep small sections in line with the overall theme of the chapter—a skill I'm sure he developed as a result of having written books himself. Martin helped a lot with technical details and perspectives from what customers see every day. And Elan excelled at noticing both small, nitpicky errors and significant technical problems.

(And that's not an insult—every technical author loves help in finding the small problems! ) Together, these three gentlemen formed a great team with complementary skills. Thanks so much, guys! The production team, headed by Patrick Kanouse, did their usual excellent job. Like the "behind-the-scenes" people in many businesses, their specific efforts might not be obvious to the public, but they are no less appreciated by me. In particular,

<https://assignbuster.com/ccna-student-guide/>

Marc Fowler, the project editor, did an incredible job working through these two books on a very tight schedule, with his usual excellent work.

You folks make me look good on paper. If only you could be in charge of my wardrobe too, I'd look good all the time! Brett Bartow, Executive Editor, did his usual New-York-Yankees-like job of helping steer these two projects toward completion.

In between talking about sports, Brett worked through the many changes in direction with this book and helped guide us to the right product. And yes, so the whole world knows, he did pick an Atlanta Braves player, John Smoltz, for his fantasy league baseball team—again proving he's a really smart guy.

Chris Cleveland developed this book and the CCNA INTRO Exam Certification Guide. He's simply the best. He also works way harder than I do to get these books to market.

You da man, Chris C! 083x\_FMi. book Page vi Thursday, July 3, 2003 12: 49 PM vi Contents at a Glance Introduction xvi Part I LAN Switching 3 Chapter 1 LAN Switching Review and Configuring Cisco 2950 LAN Switches Chapter 2 Spanning Tree Protocol Chapter 3 Virtual LANs and Trunking Part II TCP/IP 95 Chapter 4 IP Addressing and Subnetting Chapter 5 RIP, IGRP, and Static Route Concepts and Configuration Chapter 6 OSPF and EIGRP Concepts and Configuration Chapter 7 Advanced Routing Protocol Topics Chapter 8
