

# The upper big branch mine disaster

Business

A second example of cost is how the employees had to put their health at risk.

Investigators found that the mines did not have enough intimation to provide with clean and fresh air. The ventilation system was supposed to remove coal dust and other dangerous gases. None these safety processes were taken place. When autopsies were performed to the victims, medical evidence showed that 71 percent of the victims showed clinical signs of black lung disease. Rhea black lung disease can be caused by breathing in airborne coal dust environments.

An example of the benefit to stakeholders was that Massey provided many Jobs to the community. The second example is that the company of Massey was ' ere generous to the community. By providing scholarships, partnered local schools ND provided emergency support when natural disasters occurred. 2. The Massey energy behaved ethically in the virtual method because they had good values and characters by providing their community with support.

Examples are, scholarships, helping schools, and helping the community when natural disasters occurred.

They Nerve unethical in the utilitarian method because to save cost and produce more they over looked the benefits in investing in safety measures. At many times the employees would complain to the managers about the safety and the employees Nerve intimidated and put back to work as if their safety did not matter, since all they eared about was producing coal which meant dollars. Massey was very unethical in the rights method. This was

their biggest problem of all, respecting basic human rights by putting the employee's lives in danger in exchange economic power.

Massey Nas unethical in the Justice method because although they provided well-paying Job t was not enough to offset the danger they were put through. In one year Massey increase their revenue from 1. 2 billion to 2. 7 billion in one year. 3.

We believe that the Upper Big Branch disaster was caused by the company itself by not following the proper safety procedures. They cheated MASH by providing false records of accidents. They also cheated by letting the companies' managers know that Inspectors were on the way to inspect, which is a violation of the law.

By not following safety procedures like using the proper ventilation fans many chemical fumes stayed in the air and when the machine sparked it caused the explosion by killing the miners. 4.

It is simple to reduce chances of disasters by following mine safety. MASH provides safety inspections four times a year without notice. This will help the company see what they need to work on and what is being done right. Also congress table n d the U. S Bureau to Mines which conducts research on health and estate for the miners.

Also the Coal Act which was established in 1969 will protect miners by charging penalties to companies that do not follow the law.

They act also compensates the miners that were disabled by the black lung disease. The companies proper procedures to have a safe working place is <https://assignbuster.com/the-upper-big-branch-mine-disaster/>

by having managers have monthly safety meetings to make sure that everyone is following protocol. All companies should have a union so their employees can be protected from unfair treatment or being intimidated to express when they feel their life is at stake by being in an unsafe situation.
