

Ch. 3 testbank

[Finance](#), [Banks](#)

The Internet is a large network of networks. The concept of the Internet was developed by the U. S. Department of Defense as a network that would not be easily disrupted in the event of an attack. The World Wide Web was based on a protocol developed by Tim Berners-Lee. The "fathers of the Internet" are Vinton Cerf and Robert Kahn. Software that enables you to display and interact with text and other media on the web is a web browser. The web is based on the Hypertext Transfer Protocol. A computer connected to the Internet that asks for data is a client. The unique identification number assigned to your computer when you connect to the Internet is known as all of the following EXCEPT

path

dotted decimal

dotted quad
