

It by canada's boreal
forest as only 35

**ASSIGN
BUSTER**

It is to my opinion that the best course of action in this situation would be to use most of the extra forested area to expand the provincial park. There are some significant reasons for this. To begin with, since the park is very heavily used, a lot more money could be earned from tourism than what could be earned from logging.

According to a survey conducted in the year 2013 in Canada, tourism and recreation generated 618 000 jobs and created an approximate 84 billion dollars in revenue compared to the logging industry's 19.8 billion dollars to Canada's GDP. Secondly, since the natural heritage and other aspects of the natural environment are protected by the provincial park, tourism would benefit from the expansion because of the increased size of the park and along with its attractiveness and vastness. As well, despite the fact that the park will only last for the reason that it is more or less untouched, the logging industry would inexorably run out of trees by exhausting the supply of trees even on the added forest area due to logging. Thus, the money that is earned from the park will last longer. Finally, by adding most of the extra forested area to the provincial park, a lot more land could be protected, which consequently protects physical diversity. A significant part of Earth's natural ecosystems are in Canada: 25 percent of all wetland ecosystems, 15 percent of all forests, and 16 percent of all Arctic ecosystems.

Everything in these ecosystems from plants and animals to bodies of water is vital to the natural processes that keep Earth's systems stable. The natural environment and physical diversity is affected very badly from logging as there is a direct loss of natural spaces in ecosystems due to logging. This can be demonstrated and proven by Canada's boreal forest as

only 35 percent of it remains undisturbed. Thus, by adding the forested land to the provincial park, physical diversity and the environment can be protected. Therefore, the best course of action with the additional forest area is to dedicate most of it if not all to the provincial park since money could be earned in a sustainable way.
