

Science in modern life

[Environment](#), [Nature](#)

SCIENCE IN MODERN LIFE Science is the key to all the mysteries of the world. This world is like magic and science is like a magic wand which presents hundreds of theories in front of the man. Man would not have made any progress in the absence of science. Today, everything we know is just because of science. Science has opened a door before us. The one, who opens this door, sees a world full of interesting facts and figures. No area of this world has been untouched by this magic wand. In every corner of the world we see something new, may it be invented or discovered. Science has made our work a million times easier. Science has shown us how we can do a greater volume of work in shorter time and with less physical strain. Science has influenced the course of human civilization. Science has done a great service to the mankind. We cannot imagine a life without science. Every sphere of life has been revolutionized by science. It has given us many machines that have made our lives very comfortable. In our daily life it has been of the greatest help. It benefits us in variety of ways. It has become a source of economic might and power. It has provided the mankind with remarkable insights into the world we live in. Science has affected us all, every day of the year, from the moment we wake up, all day long, and through the night. Our digital alarm clock, the weather report, the car we drive, our cell phone, our connectivity to the whole world with just one click in the form of internet, the antibiotics that treat our sore throat and the light that we turn off at the end of the day have all been brought to us courtesy of science. The modern world would not be modern at all without the understandings and technology enabled by science. To understand it clearly how deeply science is interwoven within our lives, just try imagining a day

without scientific progress. Imagine how our world would be without: Electricity which lights our home, brings entertainment to our televisions and carries our voice over telephone lines. Modern Medicine which has eradicated diseases like Malaria, Polio and has developed successful treatments for once deadly infections. In fact, without science, many people alive today would have instead died of diseases that are now easily treated nowadays. The vital role of science in modern life is not overstated in view of today's world. Scientific knowledge has improved the quality of life at many different levels – from the routine workings of our everyday lives to global issues. Science has shaped public policy and personal decisions on energy, conservation, agriculture, health, transportation, and communication. Science has a great impact on economic growth and social development. It has stepped up the tempo of life. It has widened the range of our occupations. It has extended the limits of our curiosity and has given us comfort. It is difficult to say how much we owe to science in the affairs of our daily life. From the morning to midnight we are served tirelessly by science and scientific devices. It's almost impossible to overstate how many aspects of modern life have been impacted by scientific knowledge.
