

Assessment and tests evaluation

**ASSIGN
BUSTER**

Achievement and Aptitude Test They reiterate on the achieved knowledge over some issues (Astin& Antonio, . Within the aspect of achievement, the tests derive mechanisms in which one is able to know what he has achieved as a result of administering an informative session. On the other hand, these tests also exemplify the aptitude or the capacity of what an individual possesses as regards some particular knowledge. For instance, aptitude tests measure the level of capacity of an individual in mastering certain concepts within an area of concern. I chose this particular test since it entirely reflects on the individual capabilities and attitudes for success in life (Cohen, 2012).

Intelligence Test

I chose this test since it plays a lot of significance in determining the qualities and capabilities of an individual. It reflects on the level of personification one has over the looming issues in life (Anderson & Morgan, 2008).

Occupational Test

This is a test administered in order to determine the activeness and relation of ones interests with those of a certain career. For instance, if one is interested in what goes on and is done by teachers, then that particular individual can make to be a good teacher. I chose this test since it reflects in individual capabilities and interest as rested in their talents.
