The pros of using a medical terms are easy to identify, now a days if you have taken the course to help you. Having a terms complete your reports for you it seem like it would have save you a great deal of time in the medical world. In the past, people probably dictated your reports for a transcription department just like almost every other physician did. However, with the advent of EHR, most systems have allowed hospitals to practically eliminate transcription altogether. Physicians instruct many medical terms or office managers to indicate that treatments or services were provided that were not. These errors add up over time, and they can lead to the practice or medical facility being implicated in medical fraud. Also, the cons of using medical terms may receive very little training. Some of them have only received medical office training, and so their knowledge of basic medical terminology is probably not up to par with what an excellent patient report requires. That means that it's very likely that's important information is going to be missed when compiling reporting on medical terms.
