Le Dung Le Dr. Patricia Mc Evoy-Jamil English 1301 1ST Dec Positive role of Computers in Human Life Computer is a man-made machine which performs as per the instructions programmed and also executes any instructions given to it. The invention of computers happened eventually which begun with Abacus. In the year 1884 Charles Babbage invented an analytical engine which was meant to aid calculations. The principles used in this invention are still used in modern day computers. Hence Charles Babbage is also known as “ Father of Computers”.

Since these times there has been a gradual advancement in the technology which led to development of electronic computer which is a very integral part of our daily lives . In this essay we would reflect upon the positive role that computers play in our lives and understand how computer has changed the life of people.

The advantages of computers are numerous of which a few will be discussed in detail.

It is evident that from centuries humans have worked towards finding ways to make life simpler for human beings. This was demonstrated by mathematicians and scientists in their efforts to discover something new and better than the previous inventions.

Humans quest for

finding and utilising the resources in the best possible way has been existent from ages ago

when the technology which is available now was not even known to them.

The most

remarkable discovery is that of computers without which survival of humans cannot be

imagined . This can be proven by just glancing around one's surroundings where

everything from shopping, entertainment to banking is being done through computers.

The human dependability on computers is known to everyone hence showing the

role played by computers in human life.

Le 2

A computer enables connectivity to the world with the use of Internet at the comfort

of one's home or office. The web lets its users to perform a host of activities like search for

any topic of interest, updates across the world, interact with individuals from various fields

through emails or chats. Students and amateurs can use it to gain knowledge and it also being

used for training and educational purposes by faculty and corporate offices.

Hence computers

has made it possible for everyone to acquire information and stay abreast with the

<https://assignbuster.com/positive-role-of-computers-in-human-life/>

occurrences across the world and reach out to a global audience.

Corporates and other big companies cannot function without computers . All the

operational activities like allotting work to employees, tracking staff performance, handling

huge amount of critical data is done on computers . Since clients may live in a different

country computer makes interaction simpler and cost friendly when compared to usage of a

phone . The speed and accuracy offered by a computer has made humans so dependable that

no work can begin without starting up a computer. It also helps in saving time and improves

efficiency in work. It is not only used in offices but also in the medical field and has made it

easier for doctors to diagnose diseases hence allowing them to cure it appropriately.

The above advantages and many more demonstrate that the invent of computers has

made life simpler for human beings and has given them a platform of not only acquiring

knowledge but also expressing individual opinions which was not possible in earlier

times. There were times when owning a computer was considered as a luxury unlike today's

times when everyone has easy accessibility to PC's, laptops and tablets.

Computers have been successful in providing a wide variety of options to people for everything and has improved our style of living . It has increased human productivity and allows multitasking with ease . From the primitive ages the aim of human being has been to make life better which now has been achieved with the advent of computers If computers were not helpful it would not be existent in all the fields. Hence computer is undoubtedly the best invention of the 20th Century.
