professionals. without
any doubt, healthcare
technology is

[Finance](#)

Technology has changed many aspects of our lives including transportation, finance, security, communication and especially healthcare. It is playing a certain role in every process, from patient registration, electronic medical report to communication system and hospital big data. The transformation of healthcare has improved the experiences of both patient and medical professionals. Without any doubt, healthcare technology is vital to people's wellness and contributes to improve the quality of life.

It is also benefiting women in various ways. Here are some predictions of how technology will affect women's healthcare in the next five years: Generate better medical results The advance in technology has made diagnostic and scans better. The way doctors discover and treat cancers are changing. Moreover, electronic medical reports will allow all patients to access to their medical history, test results and all relevant information will be stored in online platforms. It helps women to make accurate care and monitor their health status in the most effective way. Empower women to be more proactive Technology will continue to empower women to be more proactive in taking care of their health. Wearable devices are no longer new concepts anymore.

It will keep rapidly innovating to allow women to do virtual appointments with doctors when they are too busy to make it to the hospital or clinic, get fit or even catch cancer early. Make everything more convenient Technology will allow women to remotely access to medical professionals that they do not have to take leave to visit doctors on schedule for minor questions. Imagine how convenient it is to get birth control prescriptions in just a few clicks.

Telemedicine can help women who do not have access to the same resources

as metropolitan areas. Self-service kiosk helps speeding up the registration process without having to talk to anyone. Combat sexual assault According to the statistics, 1 out of 6 American women has been the victim of attempted or completed rape in her lifetime. 91% of victims are female and 9% are male.

And as we have known from #MeToo, sexual assault is far too common and often keep being untold. It is such a critical problem not only in America but everywhere around the world. Thus, safety devices which can detect and send signal to family and friends will continue to develop to help women to protect themselves. Better safe than sorry.
