Working in an Oil Company Using Education in Engineering

Dear recruiting manager, Responding to your request to submit my resume to you for consideration in job opening after my graduation, I would hereby wish to provide my official application for the position of Flow Assurance Assistant in your organization. I have been involved in Flow assurance, business development, project management, and petroleum engineering activities in the companies where I have worked before.

My interest in writing and drawing gives me a good foundation to engage in activities related to flow assurance design. I can also write good engineering reports and play a good role in project management teams. For the past year, I have been engaged in fieldwork activities related to petroleum engineering and engineering research. I also have firsthand experience in generating business deals through business development and sales management in engineering companies. I have achieved a lot during my work life. For instance, I won a certificate of participation for completing project management in my previous company successfully as a key team player. I believe in corporate social responsibility, and I support activities that promote environmental sustainability through green activities, especially in oil and gasoline engineering companies.

I am hoping to hear from you soon. Thank you for your consideration.

Best regards,

Abdul Akoufi
