

Captain scott

**ASSIGN
BUSTER**

Robert Falcon Scott was born on June 6, 1868. Everyday he rode to school by his pony, Beep. Sometimes he slipped from his horse, but he never afraid with that. At the age of fifteen Scott became a midshipman. He began to conquered his bodily weakness and his childish faults in the navy. In 1891 he graduate from the amnion and he get a lieutenant. Scott was plan this trip to south pole with Sir Clement and everything will prepared. Scott has a high standard of conduct, Intelligence, scientific, knowledge and qualities of adventure in the Antarctic.

In the other hand Scott was assured of a finecareerin the Ana and he realized that the expedition to the pole would give him new and exciting experience, and also opportunities for scientific research, so he accepted the advice of Sir Clement. Everything will prepared seriously because this Journey became extreme round trip, so it make him very busy. Actually he ship, it was brought from Scotland to London, named " Discovery'. The expedition began from London through Atlantic Ocean and arrived in new Zealand.

Then over Rose sea, for the further journey they took several dogs, ponies, sledge and another thing they need. In the first expedition Scott lose three member of his party. Trip or the pole was got extreme weather and it become serious problem to us. They study everything in south pole, one of this are about magnetism, meteorological observations, and animal live, also any other aspect. Aftermath they were sail for home and Scott had done splendidly, and he return to find himself famous. The year between first and second Journey, coot married with Miss Kathleen Bruce, artist and sculptor in 1908.

On September 14, 1909 Scott's son was born and named Peter Markham Scott. In the second journey he took another ship, named "Terra Nova" and he prepared all with seamen. The second trip needed more power because it happened in winter, and it was like the first. When they arrived at the centre pole they put a country flag. In the other hand they got a new experience, but in another hand they got difficulties to return from the pole. Winter season made them very ill, day by day conditions grew worse and sometimes they took more than an hour to drag the sledge a mile.

Even in this condition they still wrote anything about their condition. It seems that they will die. In fact just only a few were alive on the return journey. Comment: I think the story is very attractive to know because about the exploration of Antarctica. Perhaps hardly ever everyone goes there. The story gives us a description of Antarctica. Antarctica is the centre of magnetism and has extreme temperatures that nobody has ever lived in there. It also gives us information about discipline to arrange everything we need.
