The goal behind the development of APK is research-based and the real purpose is only for the education matters. This APK totally operates for connecting wifi routers with active WPS. To use this application you do not need rooting in your mobile device. There are two methods to connect using this APK. There are Androdumpper for PC versions also. It allows permissions to make connection wifi network nearby to you on your computer enabling your device's access points with Androdumpper apk. You can be able to experience a wifi connection without any disturbances with security systems. Simply this application is designed to check WPS or wifi protected setting to provide an excellent experience with internet connections.

Features of Androdumpper

Androdumpper apk available free of charge and also called as free versions. When it mentioning free it means there are versions that you have to pay to experience its features. These are called premium versions of this APK. As I

mentioned before there are two methods to use this application on your mobile or computer. First one is no root method. It means it does not necessary to have root to use this application. When using this method Androdumpper help you to make connections with your nearby devices using access point names. It automatically saves that network to your device. You can expect a connection with the network provider at any time after that. However, you can not see passwords because there is not root involvement. You have to note that in no root method this application supports only Android devices with version five and upward.

The second method is called a root method. When you using this method this APK does not work for directly connecting to the network instead of this it works to find out passwords. When you using this application for root method you have to have android version four or upward to experience better results. In the root method already there is authentication with your network partner with Androdumpper.

Troubleshooting tips

One more interesting thing that you have to focus is troubleshooting tips with this application. It means even though you have downloaded the application correctly and install it in a proper way it may not working in your device. In this situation what you want to check first is about your android version. This is applicable only if you are using an android device. Then if there is no problem you have to check security settings in your device. The notable fact when you are using this application is to refresh your wifi network immediately after installation of APK. You can choose any network to connect to the internet.

You may see a few options first one is a custom pin, the second one is a no custom pin, and the final one is brute-force. In here you have to click on the custom pin because of with that it is not mandatory to enter a pin number. Then you have to wait until it connects with the network. Then this application will provide you details related to your network partner. you will get the name and the password of the network. The only thing you have to do is to copy it type that password in your device and log into the network. Then you can experience awesome wifi network with Androdumpper.
