(C2 2. 3) Discuss barrier to accessing health and social care services and how they may be overcome.

A minimum of 3 barriers to accessing health and social care services must be discussed. Here are the barriers that prevent an individual from accessing to Health and Social Care and early year's services. It's maybe because the individuals are aren't aware of the services available. Individuals may face more than one barrier when accessing services. Time: When an individual confirms an appointment for their serious illness they get applied with a late last minute appointment which causes the individual's illness gradually gets worse as they wait for the appointment comes nearer to the time. Financial Barrier: This to do with the cost to access a type of service.

If the Health and Social Care advice the individual and is still finding it difficult to access and still afford the transport costs to get there. If a patient has to pay for medical prescriptions or medication and cannot afford it so the individuals will not get the medicine they need to get better. Cultural Values and Belief: If the information services is written in English only then those with a different first language will not be able to understand or read about the service .

If the information is written using a specific language the individual may not be able to read it or understand it. This will cause the individual to become anxious or troubled about the service which is why it's essential that any information should be written in all languages so that the individuals can understand. Language and Communication barrier: if there is an

individual who doesn't understand what the practitioner is saying, due to their language.

If it's necessary the information should be created inaccessible to individuals who speak different languages, for example providing leaflets, posters or signs in their language only. If the individuals will like to communicate in their own way should be respected. Location Barrier: · Lack of Resources: Occasionally some services and medication and facilities for individual's needs and preferences aren't always currently available due to the staff shortages and the lack of money needed for the services. It is due to happen when there is a high demand for medication and vaccinations due to a disease which isn't available for all individuals who need it the most. So this will make individuals wait even longer until sufficient vaccine has been made and produced.
