Virtue and Care Theory

Thesis: Virtue ethics is built on the premise that the undertakings of an individual or group must be aligned with the moral tenets that define the essence of good living. The traditional and modern practices of virtue ethics intimate that character traits, vices or virtues are the key determinants of moral standings. These variables determine how humans relate to each other in the society. Nonetheless, virtue ethics has been extensively applied in the medical practice. Virtue ethics and medical practice have a high affinity, and they enhance the provision of care in healthcare facilities.
