Outline

I. Introduction

Thesis Statement: In the issue of clean water supply and abundance, the United States government should issue strict laws against water pollution because it contaminates agriculture, causes human diseases and poisons animals.

II. Agriculture Contamination

The chemicals are mixed with water which runs off.

Water runs off with some of the soil nutrients

The land becomes less fertile and unproductive.

B. Contaminated water is not fit for farming

Water contamination makes water unfit for agricultural use

Using the water for irrigation affects the plants negatively.

III. Human diseases

A. Water borne diseases can result from the use of contaminated waters.

Diseases such as typhoid, cholera, and other water borne diseases that affect humans

The diseases are brought about by ingesting contaminated water or eating foods prepared with the water.

B. Foods produced with contaminated water affect humans

Contaminated fish from lakes are consumed by humans

Residues from food grown with the water affect humans

IV. Animal Poisoning

A. The fish are affected

The fish in the lakes are affected by the chemicals, some die.

Contamination kills the water plants which provide food for the fish, hence killing them.

B. Land animals are also affected

The animals ingest contaminated plants and water

These poison the animals

V. Conclusion

It is apparent that water contamination has grave consequences on all forms of life on earth.

The issue needs to be addressed urgently

The government should enact laws to ensure that the water sources are protected, so as to ensure abundance of safe water.
