

Orthodontics personal statement personal statement examples

[Psychology](#), [Success](#)

In a fine blend of both sides of my personality, I want to be the creative artist and

mechanical engineer to be the versatile Orthodontist who brings about the beautiful

masterpiece smile. With my team of technicians, I will use logical and precisely

calculated treatment, and the tactile senses of the hands, to manipulate wires, brackets,

and appliances in a harmoniously choreographed movement of teeth with ultimate results

into that brilliantly beautiful smile, one patient at a time. Another facet I enjoy about

Orthodontics is the very personal one-on-one time with each patient, the connection when

discussing treatments, and the shared steps of positive progress towards the end results.

I am a creative and artistic person who also incorporates logical thinking and problem-solving strategies for a firm foundation in personal ideals. My objectives to

enter this graduate program are to become a practicing orthodontist who plays a clinical

role using the highest cutting-edge treatment standards, to continue my personal

education and research in the ever-changing technology in Orthodontics, and to

collaborate in new methods and innovative ideas in Orthodontics.

My personal vision fuels my objectives to find a point of convergence between

science, art, and evolving technology which will continuously raise the standards of

patient treatment and quality of service. As a professional, I must constantly be moving

forward in self-improvement, meeting new challenges in Orthodontics, and providing the

highest quality care for each individual case.

I sincerely desire to be admitted to your highly respected Orthodontic program,

and upon my completion of the program, I will enter into the Orthodontic practice and be

able to begin giving back to the community through one smile at a time. I want to further

my ties with the Orthodontic program by committing myself to research, development,

and patented alternative methods of Orthodontic treatments.

Best Regards,
