Labor Productivity calculation analysis for Spa and Salon White Canada)

Labor productivity calculation analysis is an important aspect in business because it gives a perspective on the production capacity of the labor. There are different types for the calculation of labor productivity and the simple way is ' Output divided by input' method. According to this method labor productivity is calculated by;

Labor Productivity = Labor cost per day

Production Units per day

Labor cost per person - C \$11. 86 /hr

The working hours per day = 10 hrs

Labor Cost Per Day = 118. 6

Production Units per day - 105

Labor Cost = 118. 6/105 = c\$1. 129

Labor productivity per unit= \$ 1. 129
