Homepage-

KAVANA is an appliance which will optimize fuel consumption. It works in all petrol and diesel engines.

KAVANA can be applied wherever liquid or gaseous fuels are fed through pipes into a combustion chamber. Its inconspicuous form and simple installation make this product a true Innovation in fuel consumption technology!

KAVANA is not a magnetic system. It is a novelty and complex system for the processing of liquid fuels. The creation of KAVANA resulted from many years of physical engineering development. The energetic treatment of the fuel leads to more environmentally friendly exhaust values.

Products-OK

Mounting:

The installation of KAVANA products is very simple and can be carried out without interfering with the existing pipe system.

KAVANA can be simultaneously mounted on the in-flow and return fuel pipes using the mounting bands. These bands are provided on delivery. However, if this is not possible due to the type of construction or because the pipe system is return less, KAVANA can still be mounted on the in-flow fuel pipe.

To attain the best possible result, it should be mounted as closely as possible to the carburetor, the injection system or the burner at all events.

Warranty:

A two-year manufacturer's guarantee is granted for all of the KAVANA products by KAVANA. The products may not be opened and may only be

used in the areas stated; otherwise the guarantee claim will be void. Using the product in areas not stated in the directions can also cause the product to not work correctly.

All the products delivered undergo a rigorous final inspection. Please immediately inform our sales department if defective parts are discovered. In case of faults with your product, or to file a guarantee claim (be sure to include the invoice and sales slip) please contact your trading partner or send us an e-mail.(I would insert your email here).
