

Scrap recycling industry in the us essay sample

**ASSIGN
BUSTER**

Scrap recycling is a process by which old end-of-life products are recycled into raw materials that are used to manufacture new products. Various materials such as ferrous and non-ferrous metals, paper, plastic, textiles, and rubber are recycled and used for further processes such as crude steel production, paper manufacturing, plastic manufacturing, and tire manufacturing. Recycled materials need to be used to reduce landfill waste to conserve the environment. Low carbon footprint, less pollution, and reduction in GHG emissions are the major advantages of using recycled materials. Covered in this Report

This report covers the present scenario and the growth prospects of the Scrap Recycling industry in the US for the period 2014-2018. To calculate the market size, the report considers revenue generated from sales of recycled scrap listed below: Ferrous and Non-Ferrous Metals

Plastics

Paper

Rubber

Cloths

Glass
