

# Causality and new town

## Cause and Effect: Of Moving The effects of moving to a new town or city

Nowadays, as a result of looking for better conditions of life many people have been moving from their own city to another city or country. People in all over the world are developing the necessity of find their happiness, education and a better work. Moving to a new town or city can bring some negatives and positives effects to the person who is moving. The first effect of moving to a new town or city can be found in educational life.

Since people are looking to a better education, they move to a country that can give them the possibility of be a good professional. For example, in Angola my country, if you want find a great job; you have to have an international certificate. This means that the people who are living in another country have more possibility to achieve the work. Sometimes the companies on my country prefer consider people who are from another country. In short, I am the exactly example because I moved from my country to U. S.

A to look for a spectacular certificate. The second effect of moving to a new town or city can be found in psychologist state of a person. For example, when I arrived here I had some mental problems because always I was thinking about my family that I left in Angola. A person who is homesick suffers the consequences alone and thinks a lot about the family that is away from her. In my opinion, think about the family who people left causes serious problem and the person cannot concentrate on her real objective there.

In addition, people have to be strong and control all their feelings when they are in another town. The third effect of moving to a new town is that people

spend a lot of money. To start a new life sometimes because of work or studies when people move they spend a lot of money with car, house, and school until adjust the new life with the new city. Starting a new life is kind of complicated because at first time you don't have where buy and find everything....
