

How to play soccer well

**ASSIGN
BUSTER**

Teamwork and coordination are the most important elements for a successful soccer game. The necessity for passing and moving the ball in the running game is very important for a successful game tactic. The more the game is kept in the run, the higher the chances there are of scoring a goal. Great club teams like Manchester United and Arsenal have great emphasis on passing the ball across the field. This ensures that the ball gets to a wider number of players - or rather the referee is made to run a lot more - resulting in the creation of more opportunities for scoring a goal from different crosses and angles.

A team that can move around the field with the ball is a nightmare for a goalkeeper. It not only requires him to focus on the ball from different angles but adds to the complexity of judging potential shots from a fast-moving ball. It can be said that a goal is an outcome of several mid-field operational tactics that often are based on keeping the ball changing feet more often than not.
