**ASSIGN  
BUSTER**

The people of this country enjoy all these seasons along with the different natural gifts like snowfall, different kinds of vegetables and fruits, rain, leaves shedding and many other things.

Climate of Pakistan deviates from tropical to temperate. Coastal south is dry, identified by a monsoon spell with sufficient rainfall and a dry season with minor rainfall. The province of Punjab experiences plentiful rainfall and great differences between extremes of temperature at certain places. In some parts of the country rainfall is too little while some parts experience it in abundance. However, the defined differences present among certain locations cannot be masked in spite of some generalizations. As, the area along the shoreline of Arabian Sea is typically warm, whereas the frozen snow-covered hilltops of the far north region are so cold that they cannot be accessed by anyone except for excellent climbers for a few weeks in May and June of each year. As the time passes, climate conditions of a place also keep on changing.

However, the months which have common characteristics can be grouped together and named as a "season". Pakistan has four seasons: • Winter: which is a cool and dry season. In winter the days become shorter and the night become longer. The hilly areas of Pakistan become covered with the snow which attract many people from across the country and outside the country.

Autumn: It is distinct from the other seasons. It starts after winter and lasts till March. It is also called as 'fall' because trees shed their leaves in this

season. Autumn is more like a transitory season, which is more prominent only in northern regions falling between the hot and the cool seasons.

Spring: Spring is the most blissful season. It starts in March and lasts for one to two months. In this season plants grow and flowers blossom.

'Basant', a cultural event, is another specialty of spring season. Weather is not so cool neither so hot because it is only a transitory period of short duration between summer and winter. New flowers and buds grow. A large variety of flowers is seen everywhere in spring season.

So is also the autumn, which is more prominent only in our northern regions falling between the hot and the cool seasons. • Summer rainy season and then a monsoon spell, which varies from place to place. It is the hottest season. Starting from the May it ends in the September. It stays for longest time in comparison with other seasons, which is 4 to 5 months. When it comes the days become longer compare to the other days.

The sun shines to its supreme and it becomes very hot. Children get summer vacations and to beat the heat many people visit water parks. Pakistani people visit lakes in summer and take ice creams and shakes. Special fruits of summer are mango and melon. Islamabad, the capital city, also has a varying climate throughout the year. About 11.81 inches rainfall occurs in the month of July and August, which is almost half of the total rainfall. The rest of the year has significantly less rain, which is about 3.

94 inches per month. In spring, hailstorms also occur. Karachi, which is the biggest city of Pakistan gets much less rainfall than Islamabad but is more

humid. Most months of the year are super dry with little rainfall. The temperature is also more consistent in Karachi than in Islamabad. Pakistan is blessed with all types of seasons with varying duration. Every season comes with different natural gifts like snowfall in winter, many varieties of vegetables and fruits, rain, leaf fall and many other things.

A large number of fruits and vegetables are available to enjoy.
