The life of an android user is based all on the services provided by Google. What if you use a different provider for your email? One of the leading providers for virtually free unlimited storage, spam filtering, built-in search and allowing the connections to various social networking sites is possible through the Hotmail services.

It is a free online service started years back in 1995 which is now acquired by Microsoft. Fortunately, if you use this reliable account then there is good news for you! Now you can get it to your Android device too! The process is quite complex but once you precisely read it then it is a Doodle. In case you find it tangled and unable doing so then our Hotmail Contact Support will help to make it a success for you.

1. On your android phone turn to the menu. 2.

Look for settings and tap on it. 3. Select "email" from the drop-down list in the settings. 4. Here, email and password field will be available and you need to enter the information wisely in the particular field. 5.

The email option will automatically configure your account. 6. Click on next.

7. Wait for few moments till the phone connect to the mail server. 8. A message "success" will display on your Android device detailing that the connection is complete. 9. You are required to test the setup of your mail by sending and receiving the mail with your android phone.

We hope these nine steps help you get connected with this easy to navigate, understandable email service. Else, Hotmail Contact Number is available
