

Global warming: a serious issue assignment

**ASSIGN
BUSTER**

Global warming is one of the most serious issues that the world is facing today. What are the causes of global warming and what measures can governments and individuals take to tackle the issue? You must answer these three things in order to fully answer the question: 1 . What are the causes of global warming? 2. What can governments do about it? 3. What can individuals do about it? Example of composition: Probably the most worrying threat to our planet at the present time is global warming. This essay will examine the reasons why global warming is occurring and discuss some possible solutions.

The predominant factors resulting in the warming Of the earth are the emissions Of CO and deforestation. CO, which damages the ozone layer, comes from several sources, but the most problematic are those coming from the burning of fossil fuels from power plants. This releases thousands of tones of CO into the atmosphere every year. Another cause of these emissions is the burning of gasoline for transportation, which continues to increase because of our demand for cars and also our increasing worldwide consumption, resulting in an increasing need to transport goods.

Also, forests store large amounts of arbor, so deforestation is causing larger amounts of CO to remain in the atmosphere. Nevertheless, there are potential ways to solve these problems, or at least reduce the effects. Firstly, governments need to reduce our dependence on fossil fuels and promote alternatives. Plant-derived plastics, bodiless, wind power and solar power are all things that are a step in the right direction, but governments need to enforce the limits on CO emissions for the polluting industries in their

countries for these to be effective. Also, individuals can play a part by making lifestyle changes.

People should try to buy cars with the best fuel economy, and only use their car when really necessary. They can also switch to energy companies that use renewable energy rather than fossil fuels. Finally, small things like buying energy efficient light bulbs, turning off electricity in the house, and planting trees in the garden can help. To conclude, although global warming is a serious issue, there are steps that governments and individuals can take to reduce its effects. If we are to save our planet, it is important that this is treated as a priority for all concerned.
