

# Aerospace engineering

**ASSIGN  
BUSTER**

Personal ment It has been argued that Aerospace engineering is probably the most essential sector of the engineering industry in the future. Flying cars is no longer a dream, but a reality. The intricate engineering behind space shuttle, aircraft, and satellite has always captivated me since I was a toddler.

Interest, coupled with hard work and determination has taken me through my education and has seen me make a mature decision as far as my career is concerned. I developed a deep-seated interest in aerospace at a young age, and decided that I would major in aerospace later in life. Go fight the slash of rain and face the force of wind, your cheeks will tan and the palm of your hands shall thicken. This is a motto that has constantly driven me and given me the zeal to work even harder, whether on the hundred occasions when I contacted people and hosted events at the ' I can fly' program both in high school and college, or whenever I face a challenge in my program at the university. My deep interest in aerospace engineering has provided me with a focus in my life and noteworthy opportunities.

I am currently a bioengineering student, but intent to fulfill my long cherished dream by studying aerospace engineering. Further, I want to apply for other internships offered by other airlines, but they are limited to aerospace engineering major, and I may never get a chance if I am a bioengineering. In the past few years I have been in the university, I have had experiences that have assisted me become more familiar with aerospace, while at the same time boosting my interest. I joined the ' I can fly' program at the Cathy Pacific Airways, which explores several careers in aviation. Through the several lecturers, field trips, and hands-on exercises within the program, I gained valuable experiences in the aviation field. I was

later elected the vice-president of the advanced 'I can fly' program, an opportunity that equipped me with the knowledge of a real employee within aviation. In program, I had an opportunity to help the people repair jets and planes and hear stories from the retired veterans, which would help me in future. I have gained more than my expectations from this program and books, and I intent to further my knowledge by enrolling as a student in your esteemed university.

Despite being a woman, I have a passion in aviation, believing nothing is impossible. I have some personal attributes that I believe have been a source of motivation and success in my academic and social life. I intent to use these attributes to boost the academic face of your university, while at the same time building my future foundation. I am creative and original, and most importantly, not afraid of facing challenges. Moreover, I possess an enterprising spirit that helps me in getting solution to difficult situations, and an indomitable willpower that assists me in overcoming difficulties. In addition to this, I am good at facing my weaknesses, and good at self-analysis, self-stimulation, and self-correction. This has helped me become successful, and it is my belief that they shall lead me to greater success in future. It is, therefore, my heartfelt desire that I may continue on my dream career within your highly esteemed university.
