**ASSIGN  
BUSTER**

Although, since my school days I was inclined toward sciences but choosing Undergraduate Studies in Electronics and Communication Engineering from University of Sheffield in UK was by far the wisest decision of my life as the subject was harmonized with my engineering nature.

Being a UK's top tier university graduate I quickly entered in my professional life and worked for one of the best forward thinking employers in their respective fields. The diverse array of work, exposure to the multitude of nationalities provided a fantastic platform to build my multi-cultural experience and career progression. It also empowered me with leadership, knowledge of business fundamentals, problem solving using both logic, creative and innovative approaches, excellent analytical skills, exercising good judgment and accepting responsibilities. Working with multidisciplinary teams at broad level also equipped me with increased awareness of the necessary social, cultural, and wider professional responsibilities. Some of my achievements were being awarded with super excellence performance award and nominated for Best technical personal along with best innovative and creative employee for years 2016 and 2017 respectively by the government of UAE. As a goal of an entrepreneur to bring dreams and visions to actual reality.

I have always longed to be someone who benefits a lot from the world of business. I have learned a lot out of my experience that modern day entrepreneurs have altogether worked in using technology in order to enhance the quality of our lives. Even though creative genius and technological proficiency are the key strengths of an enterprise, success in engineering requires high level of organization as well as strong management

skills. My engineering experience has taught me the principles of creating and inventing, where my leadership skills will allow me to see the applications for new technology. I firmly believe that engineers should be able to incorporate different views of management, as well as their economic expertise as a part of curriculum in order to manage all their practices effectively, as well as search for creative solutions. I consider Canada as a better option for my master degree due to its higher standards and global recognition of education system. Being a most diverse and vibrant country, with a peaceful and safe environment, it is home to millions of immigrants from all over the world where different perspectives are respected and learning together is encouraged.

With a Master of Engineering Management degree from a reputed university like Windsor I will certainly get an edge over others as the program will enhance my competitiveness and proficiency due to its structure which provides a perfect combination of theory and practical, it will also provide me with opportunities to reap the maximum benefit. Apart from the direct benefit, this program will help me to become the alumni of the respective institute. My network will grow which will enable me to gain knowledge that will further have a positive impact on my career. With an opportunity of studying with other international students from numerous countries will enhance my international exposure with an international culture aids in business and management and grooming of overall skills, which is truly incomparable. To conclude, having high quality of education and exposure in the engineering field now I wish to complement all this with focused and

structured study of management to launch a successful managerial career and University of Windsor is the right platform to move towards my goals.
