Computerized enrollment. The technology today plays a vital role in our society. It makes man work easier and fast. It lessens error of work by using machines. It reduces costs to an organization from paper works up to computerized working system. Many manual transactions can be computerized by using software applications or computer systems to make work easier and efficient. AADVANTAGES OF COMPUTERIZED ENROLLMENT

INTRODUCTION: The technology today plays a vital role in our society. It makes man work easier and fast. It lessens error of work by using machines.

It reduces costs to an organization from paper works up to computerized working system. Many manual transactions can be computerized by using software applications or computer systems to make work easier and efficient. The use of computers during enrollment will give students an introduction of using technology. They will realize that their schools will have its innovation when it comes to enrollment. Schools use computers for enrollment to make its system fast and very convenient for students and for the school's employees. STATEMENT OF THE PROBLEM:

Since some schools are doing their steps in using computers for enrollment, PATTS College of Aeronautics is still behind and no plans yet of doing the same as what other schools are doing. Some schools don't even have high tuition fee and can even innovate the system of enrollment, this lead to a very big question for PATTS. When will PATTS change their system of enrollment? Do PATTS think about the great results of changing the process of enrollment? Will the students support the campaign of changing the system and process of enrollment in PATTS?
