

There likelihood of  
them committing  
crimes increases

There are many different reasons as to why someone commits a crime however, a major factor is the environment that individual is placed in. When an individual is born and raised in an environment where a person's only option to advance in life is through criminal acts, it contributes to why crime occurs. When an individual grows up in an environment riddled with crime, it makes it more difficult for that individual to avoid going down the criminal path. The likelihood someone who is surrounded by crime, in the household and in their social circle, begins a criminal life of their own, increases.

On the other hand, when an individual's parents or guardians are not present in their childhood or are financially unstable, delinquent and anti-social personalities and characteristics begin to develop. As those characteristics develop, the likelihood of them committing crimes increases significantly. The isolation, abuse, and neglect of an individual in their childhood does play a huge part in their future criminality. Studies have proven that children who have been neglected or abused have a fifty percent higher chance of engaging in criminal acts (Holmes et al., 2001). With such evidence proving that the environment, mentally and physically, a child is raised in plays a role in their future criminal acts, depicts a cause and effect relationship.

Another effect that plays hand-in-hand with neglect and abuse of a child is financial instability. When an individual, child or adult, want something they can not afford, they are faced with two options: work hard for the money to earn it or commit to a life of crime and steal it. Financial instability is a heavy weight for anyone but more importantly for individuals who have always been

surrounded by crime their entire life. Overall, when a person is raised in an environment of crime, the probability a person falls into a life of crime is much higher.
