

The truth is written in
the cheese

Business

Why are rats known for being attracted to cheese? Rats aren't *just* attracted to cheese, rats will eat anything and everything they could possibly get their little tiny fingers on, without being caught by us humans. They're just portrayed to only be interested in cheese in the movies, but let's face it, even though that's extremely cute, it's not all real. I mean, yes, if a director of a film had a scene with a rat in it running towards cheese. Then that probably really would happen. But genuinely, rats will eat anything tasty. It could be from peanut butter to some other rat.

The possibilities are endless.
