benefits

(Ball, D. A., Geringer, M. J., McNett, J. M., & Minor, M. S., 2013, p. 251).

I would recommend to Foley to implement market entry via a wholly owned subsidiary. If the numbers are right, they will make a profit out of it – if not they have the option to turn it into a Turn Key project where they can turn it over to the government for profit. Another reason to form a wholly owned subsidiary is to reduce the liability of obtaining a new or risky business. The parent company is essentially responsible for securing financial obligations

of their subsidiary but forming it as a wholly owned subsidiary reduces the risk and separates the financial responsibility of each entity. Forming a wholly owned subsidiary is different from a merger and even consolidation. A merger is the combining two companies where one is completely absorbed and individual identity of one is lost (Chantal, 2012).

Get the legal details sorted out. Foley Executives should visit local government websites and talk to people in the know about the kind of licenses and certifications required to set up shop. Once this is done, Foley can confidently go ahead with buying equipment and hiring employees for your business (Srinivasan, 2014).

Market Research. Foley will want to spend a significant amount of time analyzing local spending habits, as well as how much time, energy, and capital will be dedicated to marketing its products and services. If feasible, they should try setting up a trial run or conducting surveys before investing very much capital. They should not overlook how much they will have to pay employees, nor what work habits are like in the country (Kaiser, 2016). The locals and employees are critical to Foley's Success. Knowing their culture and norms will go a long way to setting up a work environment that people are happy with. However this is dependent on how well Foley gets to know them before working with them (Srinivasan, 2014).

Political Climate and Property Rights & overall economic overview. Some countries around the world have a record of confiscating property and/or businesses owned by foreigners. Countries with low debt-to-GDP ratios, low or declining unemployment, and strong consumer spending normally make

for good prospects. A growing middle class, low inflation and rising incomes are all positive signs. It's definitely possible to form a profitable business in a country with a stagnating economy, but it very well may be an uphill battle (Kaiser, 2016).
