Technology Changing the Face of Education Case Study:

Nowadays technology plays a very important role in the majority of spheres of the human life: education, business, healthcare, entertainment, etc. The influence of technology is more and more visible in education and this process can be observed from different sides. On the one hand one can say that technologies improve the quality of education, as more and more schools and universities are equipped with computers and various devices which are required for the development of the student's professional skills. It is a big plus that infants have the chance to receive education with the help of computers in the form of game, as game education is the most useful one – children remember more information and train the basic reading and counting skills.

Teachers use videos from YouTube making education more social – people from all over the world cooperate for the accumulation of knowledge and its free distribution to children. There are many computer programs which train student's skills in business, physics, history, languages, etc. It is easy to learn English with the help of technologies, because it is nearly everywhere. One can train reading skills searching something in Google and Yahoo and using application software in numerous devices – smart phones, laptops, tablets, etc. On the other hand there is a negative side of technologies in education. Nowadays because of computers and tablets children stop attending libraries and reading books, as one can find a digital version of a book. Of course, digital literature is a great piece of help but the effect of reading and studying through a real book is lost. The young person is able to

devote time to the research of the problem of influence of technology on education and one is able to observe the issue from all sides trying to find the pluses and minuses of technological innovations.
