

The system will use
only for student
parent billing

**ASSIGN
BUSTER**

The purpose of this study is to develop an automatic queuing system using a touch screen panel which student can access through an RFID card. In the development of the project, a single Kiosk will be used. The project will be implemented in the middle of accounting, cashiers and registrar's office of Urdaneta City University, which will be used by approximately 11, 000 students from different colleges and departments within the university. The system will use only for student/parent billing and some other purposes in the administration department in the university. The parents/students are not capable to pay online.

Only the administrator is capable to edit or modify the records of the student. The system has only limited use during enrolment because of the upcoming freshmen new students, same is true with the parents and visitors. The system is used for usual daily transaction only.

Methodology This chapter presents the Research Design, Sources of Data (Locale of the Study and Population/Sampling). It also presents the research instrumentation, which describes the research instrument as well as data collection.

This also describes the tools for data analysis that will be used in the treatment of data. This study made use of the descriptive method of research using questionnaires in determining the cause of queue inefficiency encountered by students of Urdaneta City University during transactions. The study will use such method because it describes the nature of situation as it exists at the time the study was conducted. According to Zulueta (2003), descriptive design identifies the presented existing condition of a particular situation with the use of questionnaire/interview guide to serve as basis for

gathering data to be analyzed and interpreted later on. Using this method it aims to determine the cause of queue inefficiency encountered by the students of Urdaneta City University during transactions, as to the profile of the students, the office where they encounter problem the most and the possible troubles they experience while in the line.

Local of the Study Urdaneta City University (UCU) started as a rewarding concept of Dr. Pedro T. Orata, world renowned educator and a Ramon Magsaysay awardee to establish an educational complex that will provide basic education all the way through higher education in a single compound.

Its humble beginning contrasts its current status as a fast growing and lone local university in the Province of Pangasinan. It started maximizing available resources to provide education to knowledge-hungry youth and young adults, believing on the principle of Education for all!

With five (5) decades of service, UCU now boasts of an enrolment of almost 11, 000 students. From the borrowed classrooms, the College has now expanded to more than seven buildings. A newly-refurbished library, student centers, a multi-media library, and renovated rooms are just some of the features that UCU could now lay claim to.
