Hunting is usually the practice of killing living animals especially wildlife, looking for food, trade or recreation. In olden days, there were no law that protected animal and people could hunt animals for food or skin which they could wear as cloths. All species of animal that are hunted are known as game and are normally migratory, mammals or non-migratory.

Main literature; There are those people who usually hunt to eliminate vermin. This usually involves controlling pest and preventing disease which might be caused by overpopulation. According to the hunting advocates, hunting can be an important component that helps, manage the wildlife for instance; when one want to maintain an inhabitants of healthy animals in a given environment's ecological carrying capacity when ordinary checks for example predators are not present. In countries like United States, those people who are part of regulatory and licensing bodies are the wildlife managers. The managers assist to set rules and regulations in which all the games will be hunted.

Even after development of agriculture, people still hunt animals for food. All kind of animals are also part of food chain, and still in natural world other animals rely on hunting and killing their associate creature in order to get something to eat and survive. Although the animal rights, advocate that people should not hunt, people still continue to hunt looking for something to eat. In some countries like Japan, Iceland, Japan hunting for whale is on the increase. People hunt whale for their meat as it is on demand in these countries. Hunting for whale especially in international water is not prohibited.

The IWC (International Whaling Commission) are in most of the countries and they are accountable for the lasting sustainability of whale's populations.

The International Whaling Commission normally permits the hunting of whales for scientific reasons and its policies state that if a whale is killed for scientific manner should be used or put up for sale for human consumption.

In modern hunting, hunting has been used as a sporting activity. Even though leisure hunters might choose to be discriminating hunters, several people hunt to enjoy the outdoors. Some of them enjoy game as a substitute to store bought meat.

A number of recreational hunters add to the modern ecological protection movement. Some famous people who are known to have spent some of their outside recreation time hunting are Teddy Roosevelt, John Muir and Aldo Leopold. There are those animals which are viewed by people as pest. Such animals are normally hunted to avoid causing destruction. This method of hunting animals which are seen as pest is known as varmint hunting.

This type of hunting attains selective manage of pests while offering recreation and is as well regulated. Some of these animals which are seen as pest e. g. wild rabbits are normally use for meat or fur. All those animals that are considered as varmint are usually hunted to protect the ecosystem.

Hunting can also be done to remove the hide and skin of an animal to use as cloth. In modern days, people could go in the forest to hunt for animals that had a good skin and could be used as a piece of cloth. Hunting is also practice in various culture and religion. There are those cultures that believe that, to become a man one has to go in the forest and hunt alone. This is a

taboo and most people who belong to this community have to go in the forest and hunt. In lot of pagan's religions, there are specific ceremonies that are conducted and people have to hunt animals that will be used for the ceremony.

The ceremonies done might differ according to the animals hunted or the period the hunt was taking place. Hunting is also done illegally by various people. In Africa most people does hunting not following rules and regulation set by the wildlife department. In Kenya, KWF (Kenya Wildlife Service) ensure that all those people who are caught poaching are taking serious action. People hunt animals for their skin which are later sold. Animals like elephants are hunted for their tasks and hooves which cost lots of dollars.

Effect of hunting; Game hunting has caused various positive and negative effects to the biomass and species diversity. Over hunting can cause some specie to become extinct in the forest. Animals like the elephants which are normally hunted for the tusk might become extinct if nothing is done to protect them. Hunting might be a powerful ecological management tool. .

In the nonexistence of predators, hunting assists manage wildlife populations. In such a situation, varmint is practiced. This type of hunting attains selective manage of pests while offering recreation and is as well regulated. All animals that are considered as varmint are usually hunted to protect the ecosystem. There those people who hunt for recreation purposes.

People gather to who go to the forest to hunt for fun. There are also those sports which are associated with hunting and people have to hunt in the forest. Hunting is usually the practice killing living animals especially wildlife,
