Project Monitoring, Evaluation and Reporting

Citing at Borg, W. D., & Gall, D. W. (1963). Educational research project it is a good idea for The managers to leverage on existing M&E systems in each organization branch to track project indicators and milestones. For this project, steps to measure progress towards achievement of outputs will be validated by the stakeholders during the inception workshops and the surveys and baseline serve to further strengthen this. The monitoring framework will capture both qualitative and quantitative results of the project. The qualitative information is very important in measuring changes in perceptions among beneficiaries. The project already has outlined some of the quantitative outputs, the results will be measured periodically, such as the number of producers who have enlisted to join and participate in the project.

Key indicators of the project will be tracked by project staff M&E team.

Information collected will be fed back to implementing teams for incorporation and knowledge sharing. In cases where project indicators and milestones are not being met, the managers will jointly come up with corrective measures. The project team will support continuous learning through the development of lessons learnt as well as success stories on a periodic basis

Other outputs such as use of locally available materials and its success will

<https://assignbuster.com/value-chain-development/>

be documented as well as the modification in the design of the technologies to suit the local conditions in the country.

The managers will hold a preliminary planning meeting before implementation during to further clarify the roles according to Oso, W. Y. (2002). state control and the management of public universities in Uganda. In conclusion, The project outputs described above are the direct results of the project implementation and course. These stem from the project objectives and therefore contribute to increasing efficiency within the company in order to realize a steady smooth growth.
