## **My life**

My name is H. A and I born on the eastern region of Saudi Arabia, a place called Alqateef. During the summer season, extremely hot and humid conditions are experienced in this region. However, cold and windy conditions are realized over winter season. I finished my high school education back in the 2005 when I was 18 years old. Later I transferred to United State of America for a three and a half years course at South Dakota School of mines and Technology. This was my first college to attend to satisfy my urge of understanding how electrical devices operate.

After completing my high school education, with the help of my friend we developed a project aiming to produce a scanner device from the component. We came up with a small electrical device where we named it remote scanner. Although it was simple, we scooped the third position in our competition.

Am undertaking a degree course and hopefully after completing, I will continue to a masters degree to become a qualified electrical engineer as I have wished for many years. On top of that, I enjoy learning others languages such as Japanese. Due to my interest, I have learnt little basics of Japanese language. I have learnt the greeting and welcoming people. I believe that one day I will learn to speak fluent Japanese language.

Becoming proficient in this language is of great importance since all the technology came from this country. Being a photographer, I purchased all my lenses and camera from Japan. Although their products are a little expensive, they are very of high quality, durable and thus can last for many years.

On conclusion, the life of a person can be described in many ways. Every person has dream and inspirations but unfortunately not all of them do satisfy them. I would like to be like those people whose memories remain long after their dead.
