

Cn appraisal

Health & Medicine, Nursing

Rapidly Critically Appraise Qualitative Evidence Are the results of the study valid (i. e., trustworthy and credible)?

a) How were study participants chosen?

_____ Randomly

b) How accuracy and completeness of data were assured?

_____ Using the Rubric score tool which is very accurate.

c) How plausible/believable are the results? Accurate

i) Are the implications of the research stated? Yes No Unknown

(1) May new insights increase sensitivity to others needs? Yes No Unknown

(2) May understandings enhance situational competence? Yes No Unknown

d) What is the effect on the reader?

(1) Are results plausible and believable?

Yes No Unknown

(2) Is the reader imaginatively drawn into the experience?

Yes No Unknown

2) What were the results?

a) Does the research approach fit the purpose of the study? Yes No Unknown

i) How does the researcher identify the study approach? Yes No Unknown

(1) Are language and concepts consistent with the approach? Yes No

Unknown

(2) Are data collection and analysis techniques appropriate? Yes No Unknown

ii) Is the significance/importance of the study explicit? Yes No Unknown

(1) Does review of the literature support a need for the study? Yes No

Unknown

(2) What is the study's potential contribution? _____ The study will improve the overall welfare of quality in the hospital as the nurses will gain more knowledge and experience to handle their work.

iii) Is the sampling strategy clear and guided by study needs? Yes No
Unknown

(1) Does the researcher control selection of the sample? Yes No Unknown

(2) Do sample composition and size reflect study needs? Yes No Unknown

b) Is the phenomenon (human experience) clearly identified? Yes

i) Are data collection procedures clear? Yes No Unknown

(1) Are sources and means of verifying data explicit? Yes No Unknown

(2) Are researcher's roles and activities explained? Yes No Unknown

ii) Are data analysis procedures described? Yes No Unknown

(1) Does analysis guide direction of sampling and when it ends? Yes No
Unknown

(2) Are data management processes described? Yes No Unknown

c) What are the reported results (description or interpretation)?

i) How are specific findings presented? ____ Using charts and graphs

(1) Is presentation logical, consistent, and easy to follow? Yes No Unknown

(2) Do quotes fit the findings they are intended to illustrate? Yes No Unknown

ii) How are overall results presented? ____ They are also presented using charts as well through conclusions and recommendations.

(1) Are meanings derived from data described in context? Yes No Unknown

(2) Does the writing effectively promote understanding? Yes No Unknown

3) Will the results help me in caring for my patient?

a) Are the results relevant to person in similar situations? Yes No Unknown

b) Are the results relevant to patient values and/or circumstances? Yes No
Unknown

c) How may the results be applied in clinical practice? ____ using the results obtained, clinics will get the importance of using this program to improve on their overall performance. Nurses should be trained while on the job so as to be more productive.

It was an easy assignment to complete the appraisal as all I had to do was to follow the program carefully from the implementation to the conclusion. This gave me all the information that I required to complete the appraisal. The article was very clear and straight to the point.
