The technology of the task of conquering everest

Technology, Information Technology

The essay sheds light upon software which can be used to calculate the height of mountains and hence making the arduous job of conquering it much easier.

Going into something prepared would definitely have favorable results when compared to venturing into a challenge completely unprepared.

To conclude it is fair to say that technology has made life sophisticated and much simpler, the software would only get better from here on in and this also means that we would be able to accomplish even the most difficult of all challenges with the use of technology in the future.
