

Owboard snowboarding, one of the most important

[Design](#), [Fashion](#)

owboard and Ski Goggles for Women 2017-2018 On one hand winters are blamed to make our lives static and boring but on the brighter side it gives us the opportunity to indulge ourselves in one of the most recreational sports of the times i. e skiing. Skiing is not just considered to be a competitive sports, rather it is a good means of transport in winters as well.

Aesthetically speaking, skiing is also about the serenity, uncrowded slopes, spectacular landscapes and peace of mind. Skiing or snowboarding nowadays encompasses a lot more that makes up the entire winter experience and that's why gaining popularity rapidly.

With the advancement and popularity of snowboarding as sports, the tools and kits involved in this activity are also being developed at a significant rate. The markets are designing the latest, most comfortable equipment to make the rides comfortable for both the genders. When it comes to snowboarding, one of the most important tool used is goggles. As the needs and requirements for women snowboarders are different as compared to men, henceforth their equipment is designed likewise.

So ladies, before making any decision regarding which pair of snowboarding glasses will meet your requirements best, let us have a look at some important aspects which may help you buy the best snowboard and ski goggles for women. Buying Guide: How do you choose the best women snowboard goggles? So ladies, here we are to help you through the best of options and facts to make your vacations safe and adventurous. We are going to guide you which goggles are the most suitable for you with respect to style, fashion, comfort, cost and safety. Lens Tint The lens tint is supposed to give you a worthy combination of depth perception, eye fatigue

<https://assignbuster.com/owboard-snowboarding-one-of-the-most-important/>

protection and color definition with the correct VLT for the light conditions. A low VLT number such as 15 percent will give less eyefatigue and is suitable for sunny days whereas a high VLT number such as 70percent means better color and depth perception and will be used best for the low-lightdays.

Eye Protection from Glare Polarized lenses are the best regarding glare reduction from sunlight as they reflect off the slopes and are best used when it's bright out. Near the end of the day when it's darkening and the long shadows appear in the snow, such polarized lenses may not be used as they have darker tint than most sun glasses. Good Peripheral Vision Though lower profile style goggles better fit with the helmet and they look more cool and fashionable but traditional style ones with larger lenses are better for the peripheral vision. It's ideal to have a vision of 180 degrees from side to side to help avoid bumping the skiers and the riders. Ventilation It's always better to buy a pair of goggles which have better venting system ladies. Though all good quality goggles are comprised of vents but some of them are better than the others for sure. More the venting, better it is to prevent fogging. There are some goggles available in the market which have the composition of battery powered fans inside to move the air and defog goggles.

So always look for a better vent system goggles for your safety and better vision. Goggle Frames Though adult women can fit into different sizes of goggles but there are some general rules and comfort levels associated with multiple frame sizes. A simple way to choose frame size is to correlate it with your head size. So, a small frame goes for a smaller head. The small size

generally fits small girls or women with smaller faces. Medium size frames will fit most of the women.

The large sized frames are obviously being designed for the larger heads and helmets but they also help in giving a better peripheral vision. Not all ladies faces and helmets are correlated with larger frames but these bigger frames definitely are advantageous in giving more lens, supporting for a widescreen and henceforth gives a bigger field of vision. Such large sized frames are best for steeps. Fit Features Ladies, never forget to consider the very important feature of goggle fit while buying a pair for yourselves. The fit features comprise of shape and size as mentioned above, face foam i. e. padding, and strap attachment.

- Padding The padding should be following your face curvature without any pressure points.

No gap is allowed between the face and foam to help prevent wind or snow to come inside. In addition to it, never go for the goggles which make you feel uncomfortable and pinch your face.

- Strap Always check for the adjustability of the strap while buying goggles for yourselves. If you get to tighten the strap to its full and it still appears to be loose, then the pair is definitely not for you. It's important to look for this feature while buying goggles ladies.
- Helmet Compatibility For a better performance, the goggle fit goes with your helmet. I will call it a better fit if the goggles fit smoothly on your face along with the strap going around your helmet.

Best Snowboard and Ski Goggles for Women 2017-2018, Reviews Let us now have a look at the best snowboard and ski goggles for women till date.

1-Bolle Duchess Goggles Overview Bolle duchess goggles are medium to small fit frame bordered pair with giving more favor to smaller faces. They have a wide field of view with vent proof equalizer and a breathable technology to give a fog free view. The outer lenses are composed of carbo glass to help prevent scratches. Moreover, the bolle duchess goggles comprise of so many features that provide comfort, enhance vision and protect the eyes from wind and harmful rays.

Pros

- The goggles provide 100 percent UV protection.
- Wider field of vision feature while being fit to smaller faces.
- Optical clarity is excellent in all weather conditions ranging from cloudy to sunny.
- Double lens composition, having anti-fog coating on the inner lens and flow-tech vents on the frame.

- Triple layer padding provides comfort and security against wind and cold temperatures.

Cons

- Better option only for smaller faces.
- The strap size is slightly shorter.
- No interchangeable lens system is provided.

Bottomline Bolle duchess goggles are considered as one of the best women's ski goggles for small faces. Given the size of frame, the view is wide. Overall, the quality and functionality both are good for the price.

2-Electric EG 2.5 goggles.

Overview Electric EG 2.5 offers a medium sized frame with a spherical type of lens. It is helmet compatible. These goggles offer triple layer face foam, and high quality anti reflection and defogging systems. The lens provide 100 percent UV protection and is comprised of dual spherical injected polycarbonate features. The anti-scratch hard coating makes it

more qualitative and resistible to all weather conditions. Pros: Freebonus lens.

- Durability is long. · Highly helmet compatible. · The appearance along with functionality is good making it more attractive to the ladies.

- These goggles have a special feature of anti-reflection coating which help to dissipate reflections. Cons: Peripheral vision is not very good. · Ventilation system is not very worthwhile and therefore causes fog on the inner side. Bottom line Big sized lenses with wider view and a great comfort level makes these goggles popular among the ladies. The interchangeable lens feature along with a medium sized frame makes it overall a good option for a wide range of women. 3- Giro Ella

Goggles Overview Giro Ella goggles have an additional feature of Quick Change Magnetic Assisted Lens system.

Else more, it comprises of Expansion View Technology which gives a wider vision at mountains and crowded slopes. The lens type is Injection Molded and cylindrical and vent system is medium, suitable for low to moderate activity. The Plush Max Fleece facing provides comfort fit and anti-fog coating features prevent condensation and add to the safety of the women riders. Pros: It keeps moisture and fog away in the most hard and non-suitable conditions.

- With Expansion View Technology, it gives a clear field of vision. · Provides the most rapid and easy to change lens system for quick adjustment in all the conditions. Cons: Lens type is cylindrical which

gives a limited vision. Bottomline The quick Change magnetic-assisted lens interchange system makes it super easy to get the lenses changed on the fly. Owing to the features and the style, these are one of the latest and best of women's specific goggles in the market these days.

4- Julbo Aerospace Goggles Overview Julbo Aerospace goggles, also termed as up and down hill goggles are first designed with the Super Flow system for the snowboarders who can use it as effectively on the uphill as on the down side. They comprise of a screen that is edged forward can be adjusted easily for ascending and descending. The spherical lens helps provide optimal vision in all the weather conditions. The photochromic lenses adapt to the light conditions. Pros· The most significant feature is this that the skiers don't need to remove the goggles while moving uphill or downhill as they have excellent defogging system and optimal visibility. Effective in both cases.

· The lenses adapt to the UV protection levels for different light conditions and dismiss the need to carry an extra pair of goggles or lenses. Cons· The only drawback is this that the mechanism is a bit difficult to use especially with the gloves put on. Bottomline Overall, Julbo Aerospace goggles is a very good choice for all type skiing woman. The Superflow technology along with good vent and excellent visibility attracts most of the women to go for this pair of goggles. 5-Anon WM1 Goggles Overview The Anon WM1 comprises of a triple layer face foam which gives a perfect fit of goggle to the face and comfortable ride for hours. Magna-Tech™ quick change lens system gives the opportunity to change the lenses on a flash. Full Perimeter Channel Venting helps defogging the goggles and pave the way for a

clear vision. Else, it comprises of the snap-back system on the strap to get the goggles fixed with any helmet with comfort and ease.

Pros: Highly convenient interchangeable lens system.

Comfortable: Reign supreme in style. Peripheral vision is

terrific. Cons: The frame size seems to be a bit bigger for a women's face.

Bottomline: Easy to replace lens feature, an excellent defogging property and easy strap adjustment along with style is all what you will get in good price if you opt for Anon WM1 goggles ladies. So see or your requirement and get this pair if needed.

6-Smith Optics I/OS goggles Overview: Smith optics goggles is a compact frame, smaller face fit type which comprise of ChromaPop lenses and quick interchangeable lens change system. It includes bright light and low light performance mirror lenses with and 5X anti fog inner lenses are inserted for a good defogging. The silicon made back strap is ultra-wide and the clip buckle helps provide quick-fit adjustment of the strap.

Pros: Super easy interchangeable lenses. Scratch resistant in long

term use. Excellent fog resistance. Provides good vision in almost all

weather conditions. Look impressive and stylish.

Great fit for smaller faces. Cons: Strap is too small to fit around every

type of helmet. It goes only for the smaller faces. Bottomline: Excluding

the helmet/goggle compatibility factor it is overall a good buy for a smaller

face and because of the high quality services it provides.
