The New Jaguar F-type The first original Jaguar F-type arrived back in 2013.

There are two main features that come to define an F-type, its divine aluminium bodywork, and the sounds it creates. The Jaguar F-Type is a perfect addition to the British firm. Providing drivers with a thrilling experience with whichever variant you pick.

The Jaguar F-Type is also nationally praised as one of the best looking open-top sports cars on sale. This all combined explains the F-types success as it appeases the demands of the driving enthusiasts and the style all in one.

The F-type is available with a turbocharged with 4 cylinders which aren't going to be very popular. There will still be a variant with a V6 or V8 supercharged motor. However, that will still be an F-type that costs around £50, 000 new and can average around 40mpg when at cruise.

The Jaguar F-Type will remain a stunning, elegant looking car with a classical sporting layout. The will always retain a strong appeal. Jaguar has accomplished the lighter F-type with a dynamic match. The F-type price is ranged to take sales away from Porsche 911 and Boxster S. Which means that there is more money for value for money with a higher spec. The rear driving handline is great as it does so well with additional stunning looks and it's a jaguar so it definitely sounds great. The new four-cylinder version entry model brings an extra dimension to the lineup.

Although if you're thinking of a V8 F-type you can obtain a 4x4 for an extra £5, 000 more than the rear-wheel-drive variant. This is worth it because it is safe without giving up any driving thrills. Jaguar F-Type Design Many people

will be against the four-cylinder engine in the Jaguar. The car weighs 52kg less than the V6 F-type with all of that weight lifted from the front of the car.

This also gives the Jaguar more power to weight not massively. 194bhp per tonne in the four cylinders and the V6 210bhp per tonne and additional ride and comfort are said to be improved. The 2 litre 296bhp is the most highly tuned of all the four cylinders. This also features a new electrohydraulic valvetrain with variable lift control. The exhaust manifold and twin-scroll turbocharger designs have also been revised to reduce pulsation. This reducing turbo lag to almost non-existent according to Jaguar.

In official terms, the Jaguar will do 0-60mph in 5.4 seconds. The transmission is an eight-speed ZF sourced automatically just driving the rear wheels. Trying to tell the difference between the four cylinders and the V6 and V8 siblings is nearly impossible. This to do with new design of the updated bumper and LED headlights which are shared across the rear.

Looking from behind you'll notice the chubby exhaust which is in a similar style to the Lamborghini Murcielago. Under the body is the suspension which uses non-adaptive dampers with reduced spring rates. Jaguar prefers the lightweight 18inch alloy wheels which are standard. However, the R-Dynamic models get 19inch alloys.

Inside the F-type Jaguar has lowered the price into the £50K sports car group but that hasn't taken the luxury out of the car. As you can expect the greater touring comfort and richer interior ambience from this than some rivals like the BMW M2 or TT RS. Although, that is why you will have to be willing to

accept the extra weight. This also being a sports car coming up to a GT which is at an affordable price point and up against simple sports cars.
