

# What is the purpose of college

While struggling to prioritize and manage my time efficiently for the complete on of finals, the recurring question of the significance of college plays in my head. Was this the right decision? Will this land me my dream job in four years? Is this a familiar feeling for all college freshmen? Questions such as these race back and forth as I try my hardest to finish work for general education classes that have absolutely no interest in.

All throughout my high school years was essentially being trained for college. The exams, essay structures, and constant lectures of expectations were all drilled into us in preparation for higher education. I've learned, however, that there are so many small but imperative details about college that a high school counselor cannot teach a person; one has to experience it for themselves. The sudden gift of freedom and the ability to exist without any supervision from those one is so accustomed to obeying, is more than enough to catch a student off guard and result in experimental behavior.

Even aside from students in their separate attempts to mind themselves and adapt to such a brand new environment, the coursework and pressure for students to have their college careers planned out is more than likely to lead to doubts and stress. In the long run, it is almost certain that the decision to obtain a degree will leave a person with a higher chance at earning a greater salary, becoming more knowledgeable of general studies, and being better able to handle both diversity and adversity.

While there are many benefits there are also many flaws in the system, as well as alternatives for those who do not believe that the college experience is right for them. One of the greatest influences of college

admissions is the impression that one is guaranteed to earn a higher salary if they have a degree of some level. While the probabilities aren't set in stone, there are some relative pieces of evidence that support HTH's theory. According to the U. S.

Census Bureau, the annual salary difference between high school graduates and those who hold a bachelors degree is roughly twentieth thousand dollars. With a college degree in a particular field one makes themselves more marketable, as well as qualified for many more open positions because of their previously acquired knowledge. In regards to the job search, the more time a person spends at a college allows them to make all the more connections which might help them land a position with ease.

As far as the economy goes in today's society, having a bachelors degree (or higher) is the equivalent to what holding a high school diploma was just years ago. As time passes, requirements become a lot more particular depending on the compensation one would like to receive from their employer. For those who are passionate about a particular subject, college is a great place to attend. The unlimited amount of resources, aid from specialized professors, and support from peers studying the exact majors are a great motivator for success.

College grants students the opportunity to find themselves in a sense. Because of all the freedoms, students gradually begin to realize their true likes and dislikes. Often times things that one thought they were passionate about end up getting replaced by a new found love. College supports these

colleges and offers platforms (such as classrooms and studies) for one to be creative and express themselves. It is not always about choosing the field that will yield the most income.

Taking the opportunity to pursue your craft, no matter what the reward, is a notion that some are away are enough to take note of and act upon. The ability to understand people and their different cultures, behaviors, etc can be learned in college as well. Universities present the chance to meet and socialize with peers from all over the world. And although this may be a bit uncomfortable and sort of a culture shock at first, the lessons and comprehensions that one leaves these friendships with are priceless and unlikely to happen in any other setting.

Aversive, or stress, may be the biggest and recurring obstacles throughout one's college career. It stems from any and every place, and happens all the time. The pressure to succeed and pass with outstanding grades and the inability to manage time effectively are probably the leading causes of stress. But, if there's anyone who can handle a week's worth of extreme stress and still manage to pull their grades together despite the occasional mental meltdown, it's a college student. But is college really necessary?

Is it really required for everyone? No, if one does decide not to attend college that in no way makes them a failure or any less superior than a graduate. Although college offers a lot of possibilities, so does the real world. There are still hundreds of ways to survive and support oneself without higher education. For starters, one can teach themselves. By simply choosing the subject of their interest, a person can master any topic he or

she desires by use Of obtainable resources such as books, videos, online tutor ails, etcetera.

A schoolbag's alternative to college is also trade school. By earning a certificate , a person can do anything from working in that corresponding area to taking the next step and opening pupa business or practice that provides that particular service. Another factor that leads people to choosing a direction other than college is the fact that it is so extremely pricey. Many people cannot make the grades forscholarships, do not receive enough in financial aid, and can not afford college out of pocket.

Therefore t hey are forced to result in a lesser alternative or just not pursuing an extended education at all. Ultimately, college is a privilege and a huge decision for anyone considering attending. Prepare ion is key: entering with a healthy mindset is ideal for a smooth transition. As for those who not s e themselves in university in the future, it is perfectly okay to chase yourdreamsand do what you set your mind and heart to.
