BUSTER**

Topic for dissertation: Chlamydia ' Trachomatis' infection among ethnic group ages 14- 24 in Miami Dade Florida This paper seeks to lay foundation for my dissertation by presenting its objective, timeline, and outline.

What I hope to accomplish this term

This term will mark the beginning of my dissertation and lay down the basis of the research. Having determined the research area, I intend to, during this term, develop an introduction of the dissertation, literature review, and methodology. The introduction will explore preliminary issues such as the problem to be investigated, research questions, and relevance of the study among others. Literature review will however review existing publications on the subject while the methodology will offer the research outline.

Timeline for the dissertation

Duration

Activity

2 weeks

Deciding on the research topic

1 week

Undertaking preliminary investigations

1 week

Identification of the problem and the problem statement

4 weeks

Undertaking research into existing literature

1 week

Writing preliminary information and problem of statement

3 weeks

Developing and writing literature review

1 week

Introduction and justification of the preferred design, statistical and ethical concepts

2 weeks

Preparation, editing and presentation of the research proposal

5 weeks

Data collection and analysis

4 weeks

Writing the dissertation

2 weeks

Editing the dissertation

2 days

Presentation of the dissertation

Outline to chapter one: Introduction

Preliminary information on the problem

Problem statement

Reason for the research

Research questions

Significance of the research

Definition of terms

Challenges

Outline to chapter 2: Literature review

Analysis and presentation of the existing literature on the topic

Outline to chapter 3: Methodology

Introduction and justification of methodology

Participants

Applied procedures

Data collection and analysis

Review of ethical and legal factors

Proposed topic

The proposal ' A Community Research to Reduce Chlamydia Trachomatis Infections among Ethnic Groups Aged 15 to 24 in Miami Dade County, Florida' is suitable as it corresponds to the aim of the study.
