

# Can knowledge be a burden rather than a benefit?

[War](#), [Cold War](#)

Knowledge is like a drug, the more you gain, the more one craves. It's widely acknowledged that knowledge is a powerful force, which is exerted in everyone's body. Retrospectively, from history and my own experiences, knowledge can either enhance life or become destructive. If human beings do not use it properly, knowledge may produce an injurious influence in science. What's more, knowledge can perplex adolescents through their growth. However, this does not mean that knowledge isn't significant; it always is a vivacious resource to keep the world continuous and intelligent consequently. When knowledge reaches a certain point, it can indeed become a burden. Throughout history during World War II, nuclear weapons have been used and caused a rigorous consequence when the United States dropped an Atomic Bomb on Japan in 1945. Since then, scientists have concentrated on these weapons of plethora destruction in case they are ever needed again. These dangerous weapons, if placed in the wrong band, can induce a large amount of annihilation. The scientists, who engaged in the innovation of these weapons, are some of the transcendent people in the world. On account of the knowledge needed to create these bombs is extravagant. Although, with all that knowledge, these people are apparently cause a risk upon the society. The extent to which their knowledge has reached, has caused a cargo on society due to that if these weapons get out and put in the wrong places carelessly, we mankind could possibly face WW III. With the augment of knowledge, the new creations and new materials to make these weapons are going to become more powerful that with one blow can harm a country. This is a hazardous example of when knowledge can be a burden rather than a benefit. Take

another example from my life experience, as I'm going through the line from impetuosity to maturity, some of my sentimental thoughts always have confused me into a deep meditation. Ingenuous imaginations were becoming fading in my thoughts instead of deliberating on how to trust people and some other things being recreated among adults. People began to hide or deceive their true feelings even between their families. There became less connection between family members, as they grow older. The lack of communication and the mass confusion among the fast developing world, drive people to vex a lot. Although, they essentially know a large quantity of knowledge, the knowledge we gain from the social experiences may against our naive thoughts inside our mind. Decreasing people's ingenuous nature and the connections of people will become even colder than nowadays situation. Even if the burden will reduce as time pass by, its impact will be everlasting in people's growth. To sum up, as the world's knowledge rapidly upsurges, knowledge won't constantly become our advantage when you look deeply into it. Some times knowledge can became an unprecedented influence both in bad and good dimensions. Contrastingly, knowledge is a vital necessity with no doubt from life experience; it still could be an insidious burden if we think more.
