

How science and technology is going to change the future

[Technology](#)

how the science and technology is going to change the future ! Introduction
Science and technology is a systematic representation which helps to build or organize one's knowledge and to acquire intelligence with some experiments and explanations. The words " science and technology" are derived from the latin and greek words 'SCIENTIA and TECHNOLOGIA'. This topic is explained with some details below. History of Science and technology

The history of science and technology is indentified as a field of history which examines how HUMANITY understands the natural world which is called science and their ability to manipulate it which is termed as technology. Before the word scientist was invented in 1833 , scientists were known as Natural Philosophers. Greatest achievements and inventions The first and foremost invention of mankind is nothing but a " WHEEL" which further passed down in the inventions of screws , levers etc.

By the mid 20th century humans had achieved a mastery in technology by making mankind sufficient to leave the atmosphere of the earth and explore space , another important invention is satellite. The first artificial satellite SPUTNIK-1 was built by SOVIET UNION which was launched on 4th OCT 1957 after revolving around the earth 1440 times which is equal to 60 million miles for 3 months burnt to ground on 4th JAN 1988 which is one of the greatest achievement in human history.

Harzadous Developments The growth and development of the harzadous side of science and technology began at the start of the world wars , the invention of ZEPPELIN, a type of rigid airship and other warcrafts such as TANKS, SUBMARINES and BATTLESHIPS caused unestimatable loss to humanity around the world . To tackle the enemies new research and <https://assignbuster.com/how-science-and-technology-is-going-to-change-the-future/>

inventions were brought in which resulted in the hazardous poison 'POLLUTION' that caused damage to our earth and us at present. Welcome to the FUTURE !!!

Technology developments tend to make the life for humans 'STRESSLESS'. Technology upgrade concepts such as flying cars, bullet trains, cloud computing enable humanity to reach their destinations swiftly and complete the works fastly thereby saving time and energy. Therefore Technology development helps the future generations fulfilling their needs. Greener IDEAS! Pollution in the world can be controlled by some of the following methods like RECYCLING, REUSING and preventing the methods and inventions that cause Pollution.

Technology developments are profitable to future generations when it combines with the greener ideas! , for example in 2008 the world's first bio degradable computers " the IAMECO" was built from the waste products of lumber and pulp industry in Ireland. Conclusion From these things we can conclude that technology development is needed but development which creates a pollution free earth is appreciable. Therefore the final conclusion is " GREENER THE WORLD BRIGHTER THE FUTURE"
