BUSTER**

## **The main essence of research paper**

Hello, it will take a few minutes of your attention. Are you a big fan of studies? Does this process please you? Despite your answer, keep reading this article.

“ We live to study,” said famous philosopher. It goes without saying that education is an integral part of the person’s development. Different educational institutions provide us with mental improvement, new knowledge, and skills. We can state that the time we spend at university or high school is one of the brightest pages of our life. According to the survey, not everyone can agree with such statement.

Most students are sure that learning process brings only troubles and ruins nerve cells. We assume that the reasons for it are different types of tasks, compositions, and of course, research papers. Each student is afraid of these academic writings that require a lot of time and patience. Nevertheless, we want to convince you that it is a doable task if to follow simple rules and steps. First of all, let us refresh your knowledge about the research paper definition.

You can find a lot of different incomprehensible determinations of this type of writing. But we don’t want to exhaust you with boring statements. So, a research paper is a kind of work which aims to discover some issue and give unique results. According to the investigation, such writing is well-spread in different universities as it helps to identify the level of understanding of a topic.

Moreover, we should highlight the advantages, in particular, it develops critical thinking and imagination of students; a research paper opens different aspects of scientific experiments, and the most important is that it can be the first step in our educational achievements. Be sure that there are cases when it is easier to write a coursework rather than answer simple questions. It is time to speak about the essential components of the research paper.

It is common knowledge that you should be aware of its structure as it is a basic feature of each paper work. Do you know the rule of three-components structure? In this case, it works as well. Each research paper should be well-structured and divided into the several parts. The first part is an introduction. In order to avoid misunderstanding, we want to say that here you do not give information about yourself and family. It is the paragraphs or even the whole page where you invoke people to read your work. Moreover, here you make a small overview of the topics that will be described. Do not forget, to end your introduction with the thesis sentence.

It is a good way to segway into second and the most significant part of the investigation - main body. A question related to it is rather controversial, as students are sure that it is a kind of stream of consciousness, but still the main body should include precise and concise paragraphs. We highly recommend you to use various statements and evidence as it will make your paper more diverse and exciting.

The final part is a conclusion. We are intended to break your stereotype that it is the most complicated one. Keep calm and focus your attention on the

results of the investigation because they should be given in conclusion. A small tip for you – do not depict new issues or phenomena in the end of work. Your task is to make a brief overview of the abovementioned data. There are cases, when students make a conclusion long and inconsequent. In order to avoid it, you should divide the ending of an investigation into several parts according to the paragraphs in the main body. It helps realize the aim and essence of a paper without reading of the whole work.

Second and no less significant thing is plagiarism. It is not a mystery that you will rewrite or take the main idea of somebody's investigation; so, you steal thoughts and results. Unfortunately, this is the main reason for plagiarism. What to do in such case? It is a common fact that professors appreciate when students make in-text citations when they use the words of scientists or other prominent people. It is a good way to prove that you have worked only with credible sources and your paper deserves to be read.

Thirdly, we want to admit that your content should be informative. Do not try to be funny and depict important issues in a comic way. The language of the paper should be laconic and style – neat. Do not misapply different literary devices as it is a scientific paper, so it should not have an artistic essence. Be sure that you understand the meaning of a term in order to avoid false statements. You should consult a dictionary or ask your professor for help. There is no hesitation that it is better to specify rather than make a mistake.

In order to relax you, we want to share some methods of the easy writing of wordage papers. It is a typical situation when a student has troubles with the appropriate beginning of the paper as it is complicated to choose from

millions of thoughts the best one. Do not let ambiguity destroy your inspiration. If the introduction goes first, it doesn't mean that you should write it foremost. You can begin with the main body; perhaps, it will enrich your imagination and help start a paper well.

Another key thing to know is that you should use appropriate format. It means that you can be aware of rules of formatting and apply them in your paper. There is no doubt that your mark depends on it. Note that there is a big difference between ways of writing mathematics and scholar papers.

Do not flow into a rage if you have no ideas for writing. A psychologist suggests that wish and enthusiasm come with art. Perhaps, it will be productive for you to draw a picture or just to listen to music. There is no doubt that such light things will present you a new sip for creation. So, now you know how to make your writing procedure easy.

It looks like all significant things are highlighted, but there is one more issue that needs to be clarified. Perhaps, you have guessed that we are talking about interesting topics for the investigation. Everybody will agree that we can have some troubles while choosing the main theme. We have the opportunity to look over various paper topics and pick the best. Of course, it sounds like a piece of cake but how to put it into actions? We hope that given below information will help you answer this question.

## **How to title a research paper**

Some phenomena can influence the title of paper. First of all, it depends whether you can name it without the approval of professor as there are cases when you should accept ideas of other people; but if you have the <https://assignbuster.com/research-paper-topics-10-ideas-to-get-started/>

opportunity to do it by yourself - try this chance. You can find different interesting research topics, but we invoke you to pay attention to its structure, in particular, title should:

- Be precise and concise
- Consist of no more than two sentences
- Convey the main idea of the paper
- Be well-structured and grammatically correct

We agree that it is troublesome to create a magnificent topic immediately. Nevertheless, there are some steps that can help you get it started. Check it out!

### **1. Decide the area of investigation**

It is essential to know which branch of science your paper should be dedicated to. If it is art, you can use different metaphors or other literary devices. Moreover, feel free to paste a quotation or sentence from some verses. Another key thing to know is that if you write the scientific research, you have a theme and style limitation. You cannot use epithets and affectionate words in order to make the title more attractive.

### **2. Examine your experience**

Try to recollect themes that you have already investigated. It will help you select topics that cannot be described second time. Moreover, you can test yourself and write themes that enter your head. It is undeniable that brilliant thoughts come unpredictably.

### **3. Consider your interests**

You can make a list that you are interested in and pick the topic that can be widely described. We guarantee that it will provide you with a successful result and high mark. The reason for it is that you will have more enthusiasm to create if you are keen on topic.

### **4. Pick the best three**

When you finish your list, pick the three most appropriate topics that have not yet been investigated. You should be sure that they are interesting and can be described from different aspects. Moreover, unique and original information will attract a lot of readers.

### **5. Trust encyclopedia**

Now you need appropriate terms in order to make your paper more scientific. That is why you can deepen your knowledge of the branch of your investigation, make notes of essential statements, and of course, be aware of its specificity. Moreover, you can find new facts that will make your paper interesting.

### **6. Mass Media**

We advise you to address periodical press as there you can come across the current investigations of your theme or find keywords that will help you work up the outline.

### **7. Go to library**

Probably, a librarian will give you the correct instructions and recommend some tutorials that can help achieve success. Moreover, it is a good way to find extra credible sources.

### **8. A landmark decision**

Determine which topic has more sources that can be used during its investigation. The main reason is obvious as it will make the writing procedure easier. You will not need to make extra global searching as everything will be in “ front of you.”

### **9. 1/3**

So, pick one topic and start a creation. Now you can imagine its structure and frame.

### **10. Time to act**

Rephrase your topic as a research question and try to answer. You have all necessary information that will be basic in your investigation. Think about the relationship between keywords. Are they suitable for your investigation? Accept a challenge and start writing, everything is in your hands.

Hope our set of steps will be crucial for your research paper. We aim to pick ones that are easy to apply in practice.

## **Research topics for high school students**

It is a high time to focus your attention on good research topics that can be described from different aspects. Moreover, we offer you a wide list that can meet your wishes and expectations. Hope you will pick one that will be interesting for you.

It goes without saying, it is reasonable to classify themes into several groups, in particular, political science research topics, sociological paper topics, and political topics. Now the procedure of making a decision will be not troublesome for you.

<https://assignbuster.com/research-paper-topics-10-ideas-to-get-started/>
